Roll No.	

67058

MCA 2nd Semester CBCS Scheme w.e.f. 2016-17 Examination – May, 2018

COMPILER DESIGN

Paper: 16MCA32C3

Time: Three Hours] [Maximum Marks: 80

Before answering the questions, candidates should ensure that they have been supplied the correct and complete question paper. No complaint in this regard, will be entertained after examination.

Note: Question No. 1 is compulsory. Apart from it, attempt four questions by selecting one question from each Unit. All questions carry equal marks.

1. Compulsory Question:

- (a) How linking is defined for overlay structured program?
- (b) Differentiate between pure and impureinterpreter.

- (c) How the problem of left factoring and left recursion are removed?
- (d) Show schematic form of LR parser with its parsing table.
- (e) Define various types of syntax directed translation.
- (f) What is a symbol table? Discuss various data structure used to implement it.
- (g) What role does the target machine play on code generation of compiler?
- (h) Discuss various targets for code optimization.

UNIT - I

- 2. (a) How relocation is performed by linker? Explain with example.
 - (b) What are different functions performed by loaders? Differentiate absolute, reallocating and direct linkage loader.

3. (a) Explain use and fields of following tables of macro:

KPDTAB, MDT, EVTAB, SSTAB.

(b) What are various loading schemes? Explain bootstrap loader with its merits and demerits.

UNIT - II

- 4. (a) What is the difference between:
 - (i) Passes and phases of compiler
 - (ii) Syntax analysis and semantic analysis.
 - (b) Construct the canonical LR(l) item sets for the following grammar:

$$S \rightarrow AA$$

$$A \rightarrow aA/b$$

5. (a) Consider the production:

$$S \rightarrow aAb$$

A - cd/C

Show that recursive descent parsing falls for input string "acdb", also explain Recursive Descent Algorithm.

(b) What are the problems with top down parsing?
Write the algorithm to remove left recursion from a grammar with example.

67058- -(P-4)(Q-9)(18) (3)

- 6. (a) What is an Activation record? Explain how it is relevant to the intermediate code generation phase with respect to procedure declarations.
 - (b) How declarations are done in a procedure using syntax directed translation? Explain.
- 7. (a) How assignment statement and case statements can be converted into intermediate code?

 Illustrate with example.
 - (b) What is three address code? Mention its different types. How address statements are implemented? Give example.

UNIT - IV

- 8. Define a Directed Acyclic Graph. Construct a DAG and write the sequence of instruction for the expression: a+a*(b-c)+(b-c)*d.
- 9. How structure preserving transformation is different from algebraic transformation? Explain with example.

$$a + ab - ac + bd - cd$$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bd - cd$
 $a + bb - ac + bc$
 $a + bc - ac + bd - cd$
 $a + bc - ac + bd - cd$
 $a + bc - ac + bd - cd$
 $a + bc - ac + bd - cd$
 $a + bc - ac + bd - cd$
 $a + bc - ac + bd - cd$
 $a + bc - ac + bd - cd$
 $a + bc - ac + bd - cd$
 $a + bc - ac + bd - cd$
 $a + bc - ac + bd - cd$
 $a + bc - ac + bd - cd$
 $a + bc - ac + bc - ac + bc - cd$
 $a + bc - ac + bc - ac + bc - cd$
 $a + bc - ac + bc - ac + bc - cd$
 $a + bc - ac + bc -$
